EDUCATION

University of Toronto

Bachelor of Applied Science in Computer Engineering + PEY Co-op

Toronto, ON

Sept. 2024 – May 2028

EXPERIENCE

Software Engineer

Mar. 2025 – Present

SciMynd (via Brainweber Inc.)

Remote

- Designed **evaluation pipelines** for AI-generated outputs, reduced output rejection rate by defining structured annotation schemas adopted across distributed review **teams**
- Built **structured data generation pipelines** that transformed unstructured AI outputs into schema-conformant records, enabling reliable downstream consumption by product and analytics systems.
- Authored requirement documentation and evaluation sheets that formalized human judgment checkpoints, reducing inconsistency in AI output acceptance across distributed review teams.

Software Engineer

Oct. 2024 – Mar. 2025

OrthoPop (via Brainweber Inc.)

Remote

- Shipped a real-time Voice Chat AI feature with **conversation threading and confidence-based routing**; built the escalation layer that filtered low-confidence responses before user exposure.
- Developed **structured usability and safety evaluation workflows** to measure AI output quality, producing annotated test datasets that informed iterative model improvements.
- Defined data schemas and testing protocols to ensure AI-generated clinical content met structured output standards required for production deployment.

Software Developer & Technical Lead

Jun. 2020 – Nov. 2025

UCMAS Canada & Sri Lanka

Toronto, ON / Colombo, Sri Lanka

- Managed and validated **structured scoring pipelines** processing 7,500+ competition results across national and international events, enforcing data integrity and auditability at scale.
- Designed a resource management system for 200+ assets incorporating structured access controls, automated reminders, and human-verified approval workflows.

PROJECTS

Praesidia – AI Governance & Compliance Enforcer | Electron, React, Node.js, Supabase, Tavus, Resend Mar. 2026

- Architected a **real-time AI governance platform** with a **human-in-the-loop escalation layer** — severe violations trigger immediate compliance lead review with structured incident reports containing full AI reasoning traces, ensuring no enforcement decision is fully automated.
- Designed a **structured data pipeline** that transforms raw developer workflow events (GitHub, Slack, VS Code) into schema-validated violation records, enabling consistent downstream reasoning by K2-Think API and auditable storage in Supabase PostgreSQL.
- Implemented **confidence-gated promotion**: AI-identified engineering habits are held in a review queue and only elevated to shared organizational memory after passing a human checkpoint, preventing low-signal patterns from polluting the governance model.

Revenent – GenAI Genesis (Most Efficient Memory) | FastAPI, Moorcheh AI, Tavus, PostgreSQL Mar. 2026

- Built a **human-reviewed knowledge promotion system**: a Promotion Engine using recursive semantic routing extracts high-signal engineering patterns from GitHub, Slack, and Jira, routing candidates through a **structured human review step** before committing to shared organizational memory.
- Designed a multi-namespace memory architecture ensuring **schema-consistent outputs** when the AI avatar surfaces team-wide insights; integrated **Tavus AI** and **ElevenLabs** for real-time, personalized voice mentorship.

49th – Hack Canada (3rd Place + Google AI Track) | NanoClaw, Backboard, ElevenLabs, Auth0 Mar. 2026

- Built a WhatsApp-native AI assistant using **Gemini 2.5 Flash** that generates **structured newcomer roadmaps** from unstructured conversational input, with persistent user context via **Backboard memory threads**.
- Redesigned **NanoClaw** with **Playwright + Claude Vision** to autonomously extract and structure data from government websites, converting unstructured page content into schema-conformant records.

NanoTrade ASIC – UoT IEEE Hackathon (3rd Place Overall) | Verilog, Sky130, TinyTapeout Feb. 2026

- Built a hardware-native market surveillance engine in Verilog detecting financial anomalies (Price Spikes, Quote Stuffing) at the silicon level with **80ns detection latency**; leveraged **Cognichip AI** to accelerate hardware design iteration.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Swift, Java, C, C++, Bash, HTML, CSS

Frameworks: Next.js, React, FastAPI, Node.js, Django, tRPC

AI & Agents: Claude API, Claude Code, NanoClaw, NemoClaw, OpenClaw, OpenAI Agents SDK, OpenAI Realtime API, Gemini API, LlamaIndex, LangChain, Anthropic MCP SDK, Moorcheh AI, Backboard, Antigravity, ElevenLabs, Tavus, Retell, Twilio, Resend, n8n

Developer Tools: Cursor, Git, Docker, PostgreSQL, Supabase, Redis, Vercel, AWS, Playwright, pgvector, Webhooks, MCP
