EDUCATION

University of Toronto

Bachelor of Applied Science in Computer Engineering + PEY Co-op

Toronto, ON

Sept. 2024 – May 2028

EXPERIENCE

Forward Development Engineer

Mar. 2025 – Present

SciMynd (via Brainweber Inc.)

Remote

- Designed **evaluation pipelines** for AI-generated outputs, reduced output rejection rate by defining structured annotation schemas adopted across distributed review teams
- Built **structured data generation pipelines** that transformed unstructured AI outputs into schema-conformant records, enabling reliable downstream consumption by product and analytics systems
- Authored requirement documentation and evaluation sheets that formalized human judgment checkpoints, reducing inconsistency in AI output acceptance

Software Engineer

Oct. 2024 – Mar. 2025

OrthoPop (via Brainweber Inc.)

Remote

- Shipped a real-time Voice Chat AI feature with **conversation threading and confidence-based routing**; built the escalation layer that filtered low-confidence responses before user exposure.
- Developed **structured usability and safety evaluation workflows** to measure AI output quality, producing annotated test datasets that informed iterative model improvements.
- Defined data schemas and testing protocols to ensure AI-generated clinical content met structured output standards required for production deployment.

Software Developer & Technical Lead

Jun. 2020 – Nov. 2025

UCMAS Canada & Sri Lanka

Toronto, ON / Colombo, Sri Lanka

- Managed and validated **structured scoring pipelines** processing 7,500+ competition results across national and international events, enforcing data integrity and auditability at scale.
- Designed a resource management system for 200+ assets, incorporating structured access controls, automated reminders, and human-verified approval workflows.

PROJECTS

Sage – LA Hacks (Winner: Cloudinary Track) | Multi-Agent Systems, Cloudinary, Node.js, React

Apr. 2026

- Developed a **multi-agent Socratic learning network** designed to orchestrate complex reasoning tasks through a decentralized node architecture, facilitating adaptive educational paths.
- Integrated **Cloudinary** for dynamic media optimization and delivery within the agentic workflow, ensuring high-performance asset handling for multi-modal reasoning results.
- Architected a persistent memory system allowing agents to maintain context across long-running Socratic dialogues, improving the coherence of AI-driven tutoring.

Revenent – GenAI Genesis (Winner: Most Efficient Memory) | FastAPI, Moorcheh AI, Tavus

Mar. 2026

- Built a **human-reviewed knowledge promotion system**: a Promotion Engine using recursive semantic routing extracts high-signal engineering patterns and routes candidates through a structured review step.
- Designed a multi-namespace memory architecture ensuring **schema-consistent outputs** when the AI avatar surfaces team-wide insights; integrated **Tavus AI** and **ElevenLabs** for real-time voice mentorship.

49th – Hack Canada (Winner: 3rd Place + Google AI Track) | NanoClaw, Backboard, ElevenLabs, Auth0

Mar. 2026

- Built a WhatsApp-native AI assistant using **Gemini 2.5 Flash** that generates **structured newcomer roadmaps** from unstructured conversational input with persistent user context.
- Redesigned **NanoClaw** with **Playwright + Claude Vision** to autonomously extract and structure data from government websites, converting page content into schema-conformant records.

NanoTrade ASIC – UofT IEEE Hackathon (Winner: 3rd Place Overall) | Verilog, Sky130, TinyTapeout

Feb. 2026

- Built a hardware-native market surveillance engine in Verilog detecting financial anomalies (Price Spikes, Quote Stuffing) at the silicon level with **80ns detection latency**.
- Developed a **telemetry pipeline** to process raw exchange feeds, implementing hardware-accelerated pattern matching to filter market noise before software-level analysis.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Swift, Java, C, C++, Bash, HTML, CSS, Verilog

Frameworks: Next.js, React, FastAPI, Node.js, Django, tRPC, Three.js, GSAP

AI & Agents: Claude API, OpenAI Agents SDK, Gemini API, LlamaIndex, LangChain, Anthropic MCP SDK, Moorcheh AI, Backboard, ElevenLabs, Tavus, Cloudinary SDK

Developer Tools: Cursor, Git, Docker, PostgreSQL, Supabase, Redis, Vercel, AWS, Playwright, ASIC/FPGA Logic
